PDPL Readiness Check

A bilingual (English / العربية) self-assessment that tells Egyptian companies how ready they are for the Personal Data Protection Law, what licences and DPO they need, and what to fix first, while capturing qualified leads for the consultancy behind it.

Client
Alphavito Technology Solutions, Egypt

Scope
Product, content model, design, full stack, launch

Live
pdpl.alphavito.com

Results page for a sample clinic: score, yearly licence fee, DPO category and required licences, each with an explanation on hover.

50
questions in an adaptive bank, 14 compliance areas

22
consulting services mapped to every gap

2
languages with full right-to-left Arabic layout

<100 KB
whole page, no framework, fast on mobile

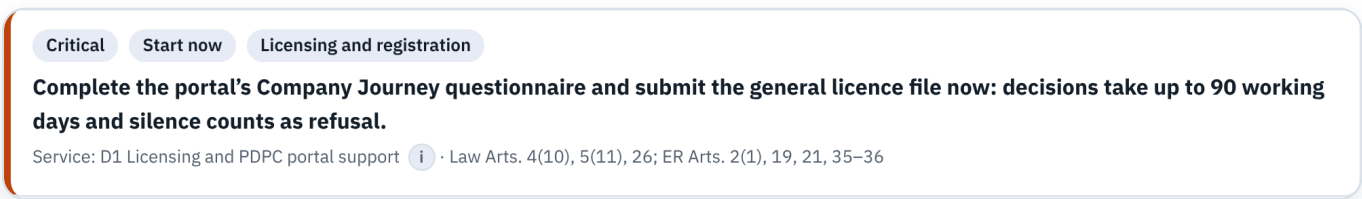

01 The challenge

Egypt's data protection law (Law 151/2020) and its 2025 Executive Regulations require most companies to hold a PDPC licence, appoint a registered Data Protection Officer and keep electronic registers, with a grace period ending 1 November 2026.

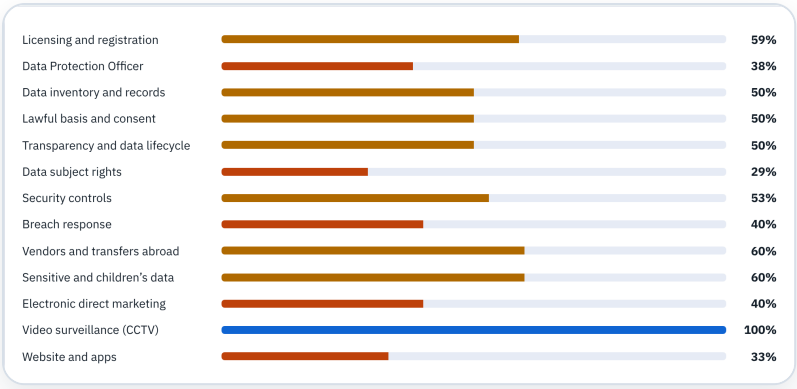

Alphavito had a 20-page catalogue mapping every legal requirement to its services, but prospects could not tell where they stood. They needed a tool that turns the law into a clear score and plan, and turns visitors into sales conversations.

02 What I built

- **Adaptive assessment:** only relevant questions appear (sensitive data, CCTV, marketing, cloud abroad, AI).
- **Weighted readiness score** with a per-area breakdown.
- **Calculators:** licence fee tier, DPO category and required licences, straight from the regulations.
- **Prioritised action plan:** each gap linked to its legal article, a catalogue service and vendor options sized to the client.
- **Lead capture:** report unlocked with name, mobile and consent; every lead stored and emailed instantly.

Each action in the plan carries a priority, a deadline, the legal basis and the Alphavito service that closes it.

Score by area shows at a glance where a company is exposed.

Arabic, right-to-left, on a phone, with tap-to-explain help on every question.

03 How it works

Static web app
HTML, CSS and vanilla JavaScript; answers stay in the browser

→

Serverless API
Node.js on Vercel (Frankfurt) validates every field

→

Postgres
Neon database stores consented leads only

→

Email alert
Resend, on a verified domain (SPF, DKIM, DMARC)

04 Privacy and security by design

- A privacy-law product that follows the law itself: opt-in consent, data minimisation, nothing leaves the browser without consent.
- Server-side validation, parameterised SQL and strict security headers.
- Secrets held only in encrypted environment variables.
- Email failures never lose a lead: it is stored first, notified second.

05 Delivery

- Gap analysis of the existing prototype against the client's service catalogue, then new questions, services and packaging added.
- GitHub repository with automatic deploys on every push.
- Custom domain, SSL and email DNS configured end to end.
- Tested on desktop and mobile, in both languages, before launch.

JavaScript · Node.js · PostgreSQL · Vercel · Neon · Resend · GitHub · RTL / i18n · Playwright

What I can build for you

- **Assessment and quiz tools** that score users and recommend next steps
- **Calculators and configurators** driven by your pricing or regulatory rules
- **Lead-generation apps** with consent, a database and instant alerts
- **Bilingual Arabic / English** web apps with proper RTL layouts
- **Turning documents into products:** from PDF or spreadsheet to a live app
- **Deployment and DNS:** Vercel, databases, domains, email deliverability
